

**Executive Order by Mallon that Continuing Work Necessary Must be Regarded and
Rewarded, 09/22/2026**

As can be seen in some of my previous material and communication, I have to keep active and successful a valid United States Presidency up to and beyond 2028 into 2029. I have not been dealt with, rewarded, or honored yet, but I do have to be, primarily because of this society being America in the years of the 2000s. Empowerment systems in the United States will likely be at least somewhat affected for the continuance following 2028. I myself have to be more than usually worked with because of the time being so long—more than 30 years—before I was dealt with, rewarded, or honored on appropriate quality levels. For these, and many other reasons, I have to have the security and authority I am supposed to have and including with many unique and privileged features.

I favor supporting, promoting, and advancing foundational principles. I want them to be understood correctly in the present and continuing times, though. I do not want current trends or habits to alter or skew the meanings or intents of the foundational principles, and I just want the founding principles that have their current meaning, applications, and benefits for any party involved. I am not trying to wipe out everything, but rather, my intent is to enable everything to be what it is, go in good and successful directions, and work out for the best of all involved. I consider that this is the underlying meaning and intent of foundational principles just like many old wise sayings that are thousands of years true.

I favor every party getting the credit deserved and also being sufficiently respectful and appreciative for receiving that credit. That is because these parties do not have to receive that credit and do not necessarily have to receive all credit due them, and there could significantly be a difference of a situation without receiving that due credit. Working correctly in these ways is always important so that there is a continuance of earning and deserving credit due and being adequately respectful and appreciative for what there is and to everyone else. Everyone does not do everything and does not show everything in the same way, but for there to be a sufficiency in right ways is always necessary. As I said before, the time of more than 30 years went by before I received the credit due me, and as much as possible, I do not want to see any such situation anywhere again.

I am not going to go into all details here, but I have many details expressed in many other places. Here, I will just say that I have to see many advancements and improvements that I am expecting and looking for. I want what I worked for and earned through the past more

than 30 years, and because that was not done adequately through those years, I have to have it securely done now and continuing. The situation is significantly difficult to have to start on the U.S. Presidential level when the situation is not really just starting out and is after more than 30 years of relevancy, but people do not know most of the relevancy or the merits. People do not know of the rights or importance, and they do not understand or know what any of this is like if they had to deal with or confront other people or entities. I have been through a lot in all these ways, so that is why I want an understood, acceptable, and sustainable situation.

My law case, cv-26-02712, was directly made for these purposes of correcting the situation and advancing everything up to date and continuing. I would not have made the law case if it was not needed. I first made seven claims that could have been worked through, but they were not and excessive further time went by. I had to then make and continue an SF-95 form with the United States government. After more than six months of nothing being worked out with the SF-95 form, I could and had to make the Federal Court law case.

Now, if the law case is advanced, there would be many advancements and differences that are important and requiring after the past more than 30 years. Mainly what would be different are corrections that are supposed to and need to be there so that situations are more right than they have been, and there would also be higher levels and advancements that would be beneficial to all parties involved. This law case deals with myself significantly because I was not previously dealt with in more than 30 years although I had many merits, credentials, and earnings previously. In the modern United States society and in many professional fields, a person has to be dealt with first before the person can represent other people or entities. With this United States credentialing systems becoming so set in their ways, they became highly monopolized and left right and worthy people not advancing adequately through the time passage and ended up not serving the purposes they were originally intended to serve, and much was being left out entirely.

The law case provides security for adjustments to be made. These are not just any adjustments, and these are the adjustments that the law is requiring and as was explained, detailed, shown, and determined in the law case. The situation involving myself has to be straightened out and advanced as is right and requiring in the years. I have to have my unique, celebrated, and famous identity and have many privileges and benefits I am supposed to and should have, including to make-up to me or compensate me for

deficiencies that were undue and an injustice to me in the past more than 30 years. Nothing was limited to or from more than 30 years ago, and everything was continuing excessively in the present times of the recent years of the 2020s, including 2025 through to in 2026 when the law case was made.

Some basics of this particular law case are that the United States caused this law case, and I had a duty to make this law case. I had important work to do concerning the United States, and I was not being paid for any of the work I had to do. I had to be paid a professional level pay for the work I had to do concerning the United States because that was the only way there would be a fair and reasonable situation. I had to be known and understood as being on the advanced and reputable professional levels I was on so that I would be regarded seriously enough and followed up with adequately. For these reasons, requested in the law case was for the United States to pay for all court costs and legal fees of the law case, for me to be paid for the work I did on this federal court law case, for my findings to be known and understood as federal law, and for me to be referred to as “Your Honor” or “Honorable” concerning this law case.

Ongoing, I have to keep on doing my work concerning the United States as best as I can and accordingly as the times enable. The necessary continuance of myself in this way should be adequately known and understood more and more in the continuing times, so there can be a reasonable understanding that I have to be adequately being rewardingly paid through the times. I have to have many exclusive rights and privileges to function on my advanced levels. I have to be the one secured by law to be the exclusive President of the United States by in 2028 and continuing, so that I am content myself and can represent, and be happy and mutual with the people of the United States.

Therefore, I issue this Executive ORDER as a standing order, pursuant to the Federal Court law case, cv-26-02712, that the money involved with me has to be worked out and paid to me as the time passes by, unique rights and privileges I have and that are underlined in the law case have to be upheld, and I, Joseph Mallon, have to securely be the one who is known and understood, without contestation or other law case, as being the United States President as of in 2028 and continuing.

Joseph Mallon

Joseph Mallon
