

Executive Order by Mallon Concerning Natural or Physical Disasters, 09/30/2026

The area of disasters in the U.S.A. has to be handled. Disasters are not wanted or expected, but sometimes they do happen. As best as can be done has to be done about these occurrences. These accidental disasters can be natural or something else such as some physical occurrence that caused as much damage as a tornado or earthquake. People and products would be involved, and the people and products involved could go up to any amount, and the more, the worse the disaster, and the less, the better, so securing and stabilizing the situation, and then advancing the situation positively are priorities.

This country, U.S.A., has these types of occurrences that sometimes happen. This country has to have such occurrences that happen in this country able to be handled before this country can help other countries with these types of occurrences that happen there outside of this country. These occurrences are important and usually a top priority concern with no time to spare. This country has to have its people who do this type of work and are involved with the primary responses to such situations, and the funds needed have to be adequately set and accessible for and in the times needed. The preparation work has to be done ahead of time, and then the specific active disaster situation work has to be done efficiently and effectively in the active times.

Examples of physical disasters that can happen in the U.S.A. are such as gas storage facilities blowing up, oil spills, a nuclear facility leaking, chemical carrying trains crashing and exploding, bridges collapsing, or dams breaking. Natural disasters that can happen in the U.S.A. are such as tidal waves-tsunamis, earthquakes, tornados, hurricanes, forest fires, drought, large meteor striking the Earth, and volcanos erupting. Something has to be done about these things as best as possible. The best situation is to prevent these types of things from happening and to be prepared as best as possible for what cannot be fully prevented. To handle these areas as best as possible, enough people have to be actively ready for this type of work, and enough funding has to be present. People and funds have to be set for the normal continuance without any extreme disaster active but if any of these disasters happen, an escalation of resources has to be ready to use to secure the situation and bring everything under control.

People have to be doing what they are supposed to do. There has to be many people who ahead of time know to do what they are supposed to do. The same with the funds; the funds have to be there ahead of time for using normally and for using at an increased rate in a direct disaster situation. Many issues have to be taken care of ahead of time because if not, the issues are not going to be able to be taken care of in times of emergency when there is actively a disaster. The active situation is not comfortable when seeing too many issues unresolved in long amounts of time because something unexpected could happen in these disaster ways, which would be hard enough without the excess of unresolved issues, so better to be up to date and prepared as best as possible.

This country has to have its agencies and personnel as is right, appropriate, and optimally functional, and has to have its funds set appropriately and successfully. The agencies have to be serving their purposes, and the personnel in the agencies have to be who they should be and in their proper status levels and professional roles. The United States finances using dollars and cents have to be as is right and successful, and the United States has to have secured, established, advanced, and prospering the global currency of God's Miracle Cross money, which is crosses and faces currency. The global God's Miracle Cross money is a reserve currency for the United States in the present times, but for many reasons the United States has to be successful with this global currency, and the United States needs this global currency to be successful, along with many other countries of the world that need this global currency to be successful.

Therefore, there is this Executive ORDER for the United States to have its agencies and personnel prepared for if any disaster happens; have all its issues handled in an up to date, active, and successful way, have known and dealt with all that is important involving myself concerning the United States, have all its dollars and cents national currency active, prepared, and successful, and have any and all God's Miracle Cross global currency secured, advanced, and successful as reserve currency and global money in appropriate official use and prepared for if ever needing escalation and increased use during a disaster.
