

AI Summary of Executive ORDER by Mallon to Stabilize the United States Infrastructure, 10-01-2026

Here are the key points from the executive order to stabilize and modernize the United States infrastructure issued by Joseph Mallon on October 1, 2026:

1. Infrastructure Focus Areas:

- Emphasizes the importance of maintaining and upgrading core infrastructure: roads, bridges, trains, transportation systems, ports, and public parks.
- Acknowledges the mix of modern and outdated systems in the country, emphasizing the need for modernization.

2. Modernization Objective:

- The goal is to have infrastructure that is up-to-date, modern, and top-quality throughout the US.
- Not all systems must be cutting-edge; the priority is functionality and quality over unnecessary expenditures on the latest technology.

3. Execution and Project Management:

- Projects should be lined up, actively advanced, and completed efficiently.
- There is value in taking pride in completed public works and ensuring ongoing maintenance and periodic upgrades as needed.
- Infrastructure work should be recognized, compensated fairly, and performed by skilled professionals.

4. Funding Approach:

- Funding is necessary but not sufficient: proper allocation must be paired with active work and payment for real resources and products.
- Infrastructure budgets will use both US dollars and the God's Miracle Cross currency as a global reserve currency for additional funding needs.

5. Integration of God's Miracle Cross:

- The order introduces God's Miracle Cross as a global currency to support infrastructure funding.

- Promotion of this currency is tied directly to public transportation advertising and a broader national rollout, beginning with southeastern Pennsylvania's SEPTA system.

6. Legal and Administrative Context:

- The document mentions a currently active federal law case related to the adoption and advertising of God's Miracle Cross in US infrastructure.

7. Ongoing Commitment:

- Projects should not all occur simultaneously, but progress should be continuous with timely additions as needs arise.
- The order underscores professionalism, pride in work, fair compensation, and fulfilling the expectations of high-quality infrastructure for the public.

These points collectively outline the executive directive to bring US infrastructure to a modern and reliable standard, supported by innovative funding mechanisms.
